

SRM-GPT — Document Management Guide

SRM INSTITUTE OF SCIENCE & TECHNOLOGY · STAFF TRAINING HANDOUT

How to upload documents and how the system decides who can see them. Share this with anyone who manages content.

1. Who can do what

Action	Admin	Teacher	Staff	Student
Upload documents	Yes	Yes	No	No
Rename / Delete documents	Yes	No	No	No
View / download	All	Yes	Yes	Only what's shared

In short: **Admins & Teachers upload. Only Admins rename or delete.** Everyone else only views what they're allowed to see.

2. How to upload a document

Open the **Documents** page (left menu) and fill the **Upload document** form:

1. **Title** — a clear, recognisable name. e.g. “CSE Sem 6 Time Table”.
2. **Category** — a label such as Notice, Time Table, Syllabus, Circular.
3. **Department** — choose from the dropdown: or a specific one ...
4. **Semester** — the semester number, if relevant (optional).
5. **Academic year** — e.g. 2025-2026.
6. **Tags** — comma-separated keywords to aid search. e.g. exam, timetable, sem6.
7. **Visible to** — tap to pick **one or more** roles:

You can combine them (e.g. Student + Teacher). Admins always see every document.
8. **Choose the file** — supported: **PDF, Word (.docx), Text (.txt), CSV**, up to **20 MB**.
9. Click **Upload and index**.

3. What happens after you upload

The system automatically saves the file, reads the text inside it, and makes it searchable. Watch the **Status** column (click **Refresh** after a few seconds):

Status	Meaning	What to do
Processing	Still being read.	Wait a few seconds, then Refresh.
Indexed	Done — now usable in chat answers.	Nothing. It's live.
Failed	Couldn't read the text (e.g. a scanned-image PDF).	Re-upload a clearer / text-based file.

Important: a document only powers chat answers once its status is **Indexed**.

4. Who can see a document — the two rules

A person can use a document only if **both** rules pass:

Rule A — Audience (the “Visible to” you picked): the viewer’s role must be in the list, or the audience is **Everyone**. (Admins bypass this and see all.)

Rule B — Department (students only):

1. Department = **All / General** → every student can use it.
2. Department = a **specific** one (e.g. CSE) → only **students of that department**.
3. A student from a different department gets a polite redirect instead of the answer:

“Dear user, I do have this information — but it is department-specific, so kindly contact the concerned HOD / Dean. Thank you for your understanding. Please keep asking your queries; we are pleased to answer you in a more customised manner.”

Teachers, staff and admins are **not** department-restricted — they see across departments. This is why the same department dropdown is used at **signup** and at **upload**, so they match.

Document	Visible to	Department	Who can use it in chat
Hostel rules	Everyone	All / General	Everyone
CSE time table	Student	Computer Science & Engineering	Only CSE students (others get the HOD/Dean message)
Faculty leave policy	Teacher, Staff	All / General	Teachers & staff (not students)
Exam circular	Student, Teacher	All / General	Students & teachers, any department

5. The document list & the chat connection

On the Documents page each row shows **Title · Department · Visible to · Status · Actions** (download / rename / delete). The list itself is filtered — a teacher never even sees admin-only documents.

When anyone asks a question in the **chat**, the assistant searches **only the documents that person is allowed to see** (Rules A + B) and answers from them. So tagging correctly is what makes the chatbot give the right answers to the right people.

One-line summary: Admins/teachers upload a file, tag **who can see it** (Visible to) and **which department** it’s for. The system indexes it. The chatbot then answers each person only from the documents they’re allowed to see — and students only get their own department’s documents.
